

Informatics Program

Services

I2b2 Self-Service

Query clinical data from the Translational Data Warehouse. Identify cohorts and pull detailed data for research projects.

Data Extraction Services

Request complex data extraction or initial data consultation

Programming

Available to support grants through data and programming work, honest broker services, and data integrations.

Data Networks

Enabling data and investigator collaborations across multiple Health Systems

Mission

- Supporting biomedical & clinical informatics by providing expert guidance, informatics tools, programming support, & managing the Translational Data Warehouse.
- Increasing use of electronic health record (EHR) data for clinical & translational research
- Maximizing the impact of research on health through an integrated CTSA informatics network.
